

Pay Station Upgrade Kits

Upgrade Kits are designed to retrofit existing pay stations. This maximizes current investment and infrastructure, while upgrading to the latest parking meter technology. The kit updates outdated components with new IPS technology and features. Designed with the service technician in mind, the modular components can be easily removed, serviced, and replaced with no more than a screwdriver. Cities benefit from lower equipment upgrade costs, ease of maintenance, reduced overall cost of ownership, and seamless integration into the IPS Data Management System.

Key Benefits

Flexibility: The upgrade kits are available in pay-by-space, pay-and-display, and pay-by-plate models. A simple change of the keypad and a firmware update are all that are required to support the different modes.

Unparalleled Power Efficiency: Powered by environmentally-friendly solar panels and combination battery packs to maximize ongoing power.

Customization: Configurable buttons include help screens, alternative languages, max time, and more.

Improved Visibility: LED lighting above the display provides enhanced visibility for motorists, technicians, and collections staff.

Customer Friendly Features: IntelliTouch™ provides additional flexibility when completing a transaction. Users may begin the payment sequence in any order after which the pay station will guide them through the transaction.

Dependability: Pay stations communicate wirelessly on the GPRS/3G cellular network, ensuring fast and reliable communications while processing secure credit card authorizations, wireless downloads of rates and messages, and transmissions to the Data Management System (DMS).

Easy Maintenance: Modularly designed with the technician in mind for easy plug-and-play maintenance.

Future-proof Design: IPS Group's open interface provides seamless integration with third-party systems, such as enforcement, permitting, and ANPR (automatic number plate recognition) in order to further optimize parking operations.
